

# HP 700/94 Client Option

With the availability of the HP 700/94 Client Option, the functionality of DynaComm Connectivity Series® 9.0 (DCS 9.0) is extended to provide access to the HP environment. As part of DCS 9.0, the HP 700/94 Client Option is based on a highly extensible object-oriented architecture and supports multiple emulation sessions from within a single instance of the application. It presents a consistent user interface and leverages the Core Product's powerful event-driven scripting functions for unrivaled application automation and extensive customization. Not only does the high degree of modularity expand functionality, it also eliminates the expense of unnecessary emulations. Proven stability and excellent performance make DCS 9.0 the preferred business solution for customers who have the need to access multiple hosts in heterogeneous environments.

## Product Highlights

- ❖ Hotspot support
