

Tandem 6530 Client Option

With the availability of the Tandem 6530 Client Option, the functionality of DynaComm Connectivity Series® 9.0 (DCS 9.0) is extended to provide access to the Tandem environment. As part of DCS 9.0, the Tandem 6530 Client Option is based on a highly extensible object-oriented architecture and supports multiple emulation sessions from within a single instance of the application. It presents a consistent user interface and leverages the core product's powerful event-driven scripting functions for unrivaled application automation and extensive interface customization. Not only does the high degree of modularity expand functionality, it also eliminates the expense of unnecessary emulations. Proven stability and excellent performance make DCS 9.0 the preferred business solution for customers who have the need to access multiple hosts in heterogeneous environments.

Product Highlights

- ❖ EM3270 support
- ❖ Block mode type ahead
- ❖ Hotspot support

Supported Emulation

- ❖ Tandem 6530

Network Connectivity

- ❖ Telnet (TCP/IP and IPX/SPX)—included in the core product
- ❖ Modem (TAPI)—included in the core product
- ❖ Direct Serial—included in the core product

File Transfer Protocols

- ❖ IXF
- ❖ FTP

FutureSoft's commitment to quality is not only evident in our products but also in our people. The mission of our Professional Support Services group is to ensure that our solutions meet the technical and business objectives of our customers. We provide the tools and information needed for improved productivity. To accomplish this, we offer a wide array of services including: Technical Support, Education Services and Consulting Services.
