

# MULTIVIEW 2008 Server Edition

## Terminal Emulation and Beyond

For clients running Windows Terminal Services  
& Citrix networks

The entire feature set of MultiView 2008 is available as a powerful thin client solution! MultiView 2008 Server Edition is a server-based product specifically engineered to integrate with the thin client architectures of Windows 2000, 2003 and 2008 Terminal Services and Citrix networks.

Based on concurrent user licensing, it embraces today's corporate IT needs for having software server-based and accessible via Windows terminals and similar cost-effective client hardware.

*HP Professional*

“MultiView 2008 Server Edition is a cost effective thin client solution from both a hardware and software perspective. And that all adds up to a thin client solution that makes good sense.”

- The MultiView 2008 Server Edition terminal emulator can be run from a super-thin Windows terminal or low-powered PC
- Optional connectivity is available to clients using Macintosh, Java, etc. via Citrix networks
- MultiView 2008 Server Edition is server-resident - no download into memory is required
- Reduction of Total Cost of Ownership (TCO) for network administration
- Centralized control of desktop configuration – the system administrator knows who is running what software
- Terminal emulation and other configuration files can easily be shared by users or user groups
- The system administrator can enable/disable components of the MultiView 2007 Desktop software, such as MultiPing, FTP
- Thin clients can use all of MultiView 2007's Web-enabling features, including browser embedding, face-lifting etc.
- Integrates with Windows policies and profiles for easy central administration

***Significantly improves IT bottom line through TCO savings***
